# Live Tooling

## Porta herramientas Giratorios

### MANUFACTURING PHILOSOPHY

All of the Live Tools are manufactured in our plant in Turin, Italy.

We ensure the best possible quality by using the most modern and advanced manufacturing machines available. The bodies of our Live Tools are machined from a solid block of steel. This monoblock construction avoids the vibration and structural defects caused by welded or bolted bodies. Each Live Tool is thoroughly tested after assembly to ensure proper operating characteristics.

### FILOSOFIA DE FABRICACION

*Todos los portaherramientas giratorios se fabrican en nuestra planta de Turín, Italia. Aseguramos la mejor calidad posible mediante el uso de las más modernas y avanzadas máquinas disponibles. El cuerpo de nuestros portaherramientas está construido exclusivamente por un bloque de acero macizo. Esta construcción monobloque evita vibraciones y defectos estructurales causados por cuerpos soldados o atornillados. Cada portaherramientas giratorio es comprobado en profundidad después del montaje para garantizar las correctas características de trabajo.*

### MODULAR CONCEPT

The modular concept used to design and build our Live Tools allows us to offer:

- Superior quality
- Extended LT range available with internal or external coolant
- Quick deliveries
- Competitive price

### CONCEPTO MODULAR

*El concepto modular usado en el diseño y fabricación nos permite ofrecer:*

- *Calidad superior*
- *Gama ampliada de portaherramientas con refrigeración interior y exterior*
- *Plazos de entrega rápidos*
- *Precios competitivos*

## “PATENTED” DRIVE TRANSMISSION

The drive transmission is the real “heart” of the Live Tool.

During the initial design of the Live Tools, we analyzed the different drive systems available on the market. We finally decided to design and patent a special and innovative drive system offering reliability and durability.

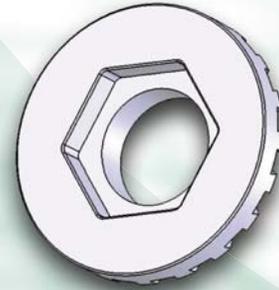

Our competition uses a drive key on the outside of the shaft and inside of the gear, generating a tangential (indirect) transmission.

The possible consequences of this system are: weakening of the shaft and the gear; low torque transmission; vibration, breakage of keys and shafts.

Our patented, SUPERCOMPACT drive system is able to eliminate all of the above described problems.

The ground shaft and the gear are mated in a single operation, in a square or hexagonal union.

All surfaces including the centering diameter are ground.

## SISTEMA DE TRANSMISIÓN PATENTADO

*El sistema de transmisión es el “corazón” de un portaherramientas giratorio.*

*Durante la fase inicial de diseño, analizamos los diferentes sistemas de transmisión existentes en el mercado.*

*Finalmente decidimos diseñar y patentar un sistema de transmisión especial y novedoso que garantiza la máxima duración y fiabilidad.*

*Nuestros competidores usan el sistema de chaveta en el exterior del eje y en el interior del engranaje, generando una transmisión tangencial (Indirecta).*

*Las posibles consecuencias de este sistema son: debilitamiento del eje y del engranaje, bajo par de transmisión; vibraciones, rotura de la chaveta y del eje.*

*Nuestra patente, un sistema de transmisión SUPER COMPACTO permite eliminar todos los problemas descritos anteriormente.*

*El eje rectificado y el engranaje se acoplan en un operación, con una unión cuadrada o hexagonal.*

*Todas las superficies, incluido el diámetro de centraje están rectificadas.*

## BEVEL GEARS FEATURES

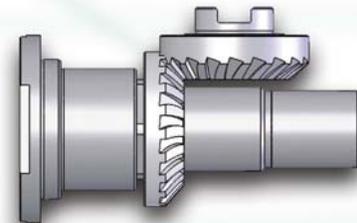

Our angular Live Tools use bevel gears with a helical tooth form.

These gears are ID and OD ground, allowing a very precise mating, higher torque and reduced heating of the tool. Possible backlash between the bevel gears is minimised during the mating of the gears and tool assembly.

This enables vibration free operation.

The bevel gears in our Live Tools have a larger circular pitch dimension compared to the gears used by our competitors. The teeth of our bevel gears are hardened to a depth of 0.6/0.8 mm (.24”/.31”).

Internal components are made of special steel, case-hardened and ground.

## DENTADO CONICO HELICOIDAL

*Nuestros portaherramientas giratorios emplean engranajes cónicos con dentado helicoidal.*

*Estos engranajes están rectificadas interior y exteriormente, permitiendo un preciso acoplamiento, alto par y una baja generación de calor. El posible juego entre los engranajes cónicos se minimiza durante el acoplamiento de los mismos durante el rodaje.*

*Esto permite un uso exento de vibraciones.*

*Los engranajes cónicos de nuestros portaherramientas poseen un mayor diámetro primitivo en comparación con los engranajes usados por nuestros competidores.*

*Los dientes de nuestros engranajes están templados en una profundidad de entre 0.6 y 0.8 mm (.24”/.31”).*

*Los componentes internos están realizados en un acero especial, cementados y rectificadas.*

## BEARINGS FEATURES

After careful analysis, the bearings we use have been chosen specifically for our Live Tools.

They are sealed on one side only, to exchange heat and lubrication; the two bearings operate in the Live Tool as a single bearing.

## PRESTACIONES DE LOS RODAMIENTOS

*Después de numerosas y cuidadosas pruebas, los rodamientos usados en nuestros portaherramientas han sido especialmente seleccionados. Los rodamientos están sellados únicamente por la cara exterior, lo que permite el intercambio de calor y engrase; los 2 rodamientos trabajan como uno sólo en el portaherramientas.*

## “PATENTED” SEALING

Our Live Tools are fully “sealed” using special “labyrinth” seals.

The two seals sit between the tool body and the rotating shaft, one located near the rotating shaft, the other one is inside preventing the entry of dirt chips and fluid and providing a long life for the bevel gears and bearings.

This is the “added value” we design into our Live Tools to deliver sturdiness, quality and durability to our customers.

## SISTEMA HERMÉTICO PATENTADO

*Nuestros portaherramientas son totalmente herméticos mediante una serie de juntas de laberinto especiales.*

*Dos sedes de juntas entre el cuerpo del portaherramientas y el eje giratorio, una situada cerca del eje giratorio y la otra en su interior para evitar la entrada de virutas o taladrina, permitiendo de esta manera una larga duración de los engranajes cónicos y rodamientos.*

*Este es un “valor añadido” en el diseño de nuestros portaherramientas para suministrar la robustez, calidad y durabilidad requerida por nuestros clientes.*

## TEST STAND & QUALITY CERTIFICATE

Each tool is tested at maximum rpm for 1 hour to guarantee durability and once the durability test is completed, the Live Tool has new lubrication added and an additional test at maximum speed is performed to check following values:

Geometric dimensions - temperature - noise and vibration.

The test report for each Live Tool is included in the box with that tool.

This procedure assures the maximum traceability of the processes and the total quality certification of our products.

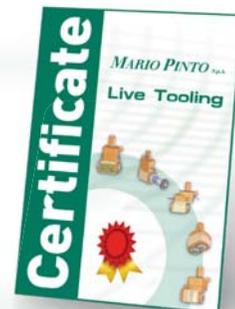

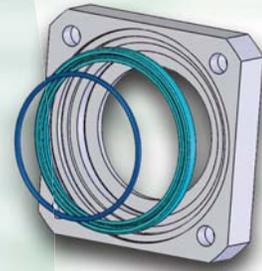

## CONTROL Y CERTIFICADO DE CALIDAD

*Cada portaherramientas giratorio se prueba a la máxima velocidad (rpm) durante 1 hora para garantizar su correcto montaje y funcionamiento. Una vez finalizada la prueba, se engrasa nuevamente y se hace una prueba adicional a máxima velocidad para comprobar los siguientes valores:*

*Dimensiones geométricas - Temperatura - Ruido y vibraciones.*

*La hoja de certificado de cada portaherramientas se incluye en su caja.*

*Este prueba asegura la mayor trazabilidad del proceso y la certificación de la calidad de la totalidad de nuestros productos.*

## WARMING UP THE LIVE TOOLS

For the correct use of our Live Tools at max speed, we recommend a run up period of 40 second at 500 rpm.

## CALENTAMIENTO DE LOS PORTAHERRAMIENTAS

Para un uso correcto de nuestros portaherramientas a máxima velocidad, se recomienda un calentamiento de al menos 40 segundos a 500 rpm.

## PACKAGING

The packaging of our Live Tool has been developed to facilitate easy and quick identification by the operators and to avoid the error of shipping the wrong tool.

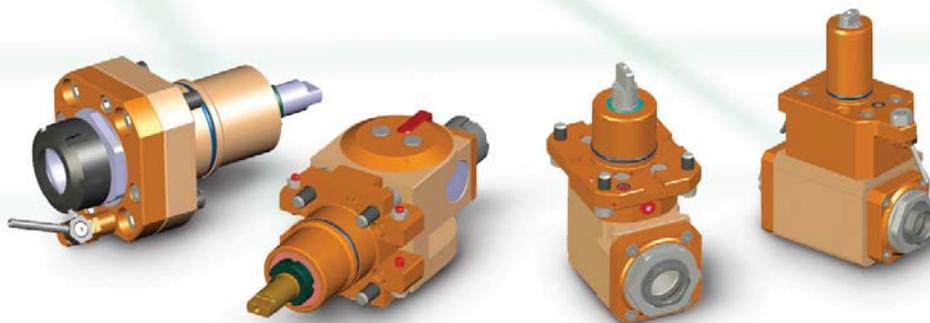

On the outside of every box there is a short description, a picture and a bar code label. In addition to the use and maintenance manual, inside every box is a wrench kit for proper Live Tool use and in the angular tool box also a greasing kit. Inside every shell-mill box is a set of spacers and mounting accessories.

## EMBALAJE

El embalaje de nuestros portaherramientas ha sido desarrollado para facilitar una fácil y rápida identificación para el usuario y evitar errores en el envío de la herramienta equivocada.

En el exterior de cada caja hay una pequeña descripción, una fotografía y una etiqueta con código de barras. Además del manual de uso y mantenimiento, en el interior de cada caja está un KIT de llaves para el montaje correcto de la herramienta y en los portaherramientas acodados un kit de engrase.

En cada caja de portafresas está incluido un kit de separadores y accesorios de montaje.

MARIO PINTO S.p.A ("MPT") was established in Torino in 1922. Since that time we have been designing and producing chucks and clamping systems.

In 1999 MPT joined the SMW-AUTOBLOK group, a worldwide leader in clamping technology, maintaining its own catalogue and product range.

MPT products are used worldwide in all fields: machine tool, automotive, aerospace, agriculture, mining, energy exploration, the pharmaceutical industry, the production of press machines, and more.

MPT means quality and reliability, not only for the design and application of a wide range of products, but also for sales and after-sales service through our worldwide network of offices.

Our research activities, the many patented products, our constant investment in human resources and in the most modern production means allow MPT to produce world class in a highly competitive and globalized market.

Through the many experiences developed over the years, our team has planned and developed a joint strategy in the study and implementation of this project, introducing us with personality and success in the market of static and rotary tool holder for turning centers with a range of models used on the best machine tools worldwide.

*MARIO PINTO S.p.A. ("MPT") fue fundada en Turín en 1922. Desde entonces hemos estado diseñando y fabricando platos y sistemas de amarre.*

*En 1999, MPT entró a formar parte del grupo SMW-AUTOBLOK, un líder a nivel mundial en tecnología de amarre, manteniendo su propio catálogo y gama de producto. Los productos de MPT se utilizan en todos los campos a nivel mundial: máquina herramienta, automoción, aeroespacial, agricultura, minería, energía, industria farmacéutica, fabricación de prensas, etc.*

*MPT significa calidad y fiabilidad, no únicamente por el diseño y su aplicación en una amplia gama de productos, si no también por la red de venta y servicio técnico a través de una red de delegaciones por todo el mundo. Nuestra labor de investigación, la cantidad de productos patentados, nuestra constante inversión en medios humanos y en los más modernos sistemas de fabricación permiten a MPT fabricar productos de alta gama en este mercado altamente competitivo y globalizado.*

*A través de la experiencia adquirida con el paso de los años, nuestro equipo ha planificado y desarrollado una estrategia conjunta en el estudio e implantación de éste proyecto, presentándonos con personalidad y éxito en el mercado de los portaherramientas estáticos y rotativos para centros de torneado, con el rango de modelos más empleado en las mejores máquinas de todo el mundo.*
